GridView Solutions

GridView is a great reporting tool for sites with Job Cost, Inventory, Order Entry, and/or Purchase Orders. You can select, filter, cross-reference, and sort. Columns can even be calculated. Once a view is displayed, it can be printed or sent direct to Excel.

Click [screen captures](#) for these sample GridView inquiries.

Item Inquiry – QOH, Sales Orders, Purchase Orders

Select the item number in the first view (Items.gv) and the other views display:

1. all outstanding orders for that item (Item Ordered.gv)
2. quantity on hand by location (Item Qty.gv)
3. open POs (Item PO.gv).

Order Inquiry – with Item QOH and Purchase Orders

Select the customer number in the first view (Order Header.gv) and see all of the customer's open orders (Order Detail.gv). Then drill down on a line item for the details:

1. item's quantity on hand by location (Item Qty.gv)
2. open POs (Item PO.gv).

Today's Tip – ExcelDirect

Click [Common Features - Excel Direct](#) to start the video.

You can create Excel spreadsheets direct from Adagio with a single click on the ExcelDirect button.

- Financial Statements
- Statement Groups
- GridView views
- Grids and SmartFinder (F6) grids - First, choose columns with the column editor and select rows with filters, if desired
