

The SmartRecords for Adagio electronic filing system

helps you regain order and control of your information, to ensure consistency while improving the way you serve your clients.

Use SmartRecords to store, track and retrieve any document, data file, report, listing, specification file, or record within your company's data.

Power Features and Control

- SmartRecords' powerful search function quickly locates any information or document.
- Automatic document versioning retains history as users modify documents.
- Compliance management ensures company policies are enforced by reporting on missing documents or incomplete information.
- Reminder dates can be set up to ensure that important events or recurring tasks are not missed.
- Workflow and diary functions efficiently distribute work within your office.
- Powerful security and access controls protect data and privacy.
- SmartRecords is highly user-configurable, to capture different types of information for different types of companies.

Easy to Use

- No expert programming required. Users can easily set-up new data fields and document types. As information needs change, SmartRecords can easily be tailored to meet these needs.
- Updated records: data can be refreshed at any time as information changes within Adagio.

Records Correspond to Module Files

- Record types can be set-up corresponding to master files in various Adagio modules, such as:
 - Vendors from Adagio Payables
 - Customers from Adagio Receivables
 - Jobs from Adagio JobCost
 - Assets from SRSOft Fixed Assets for Adagio
